Abstract: In the title compound, C₁₀H₆BrN₃O₂, the indazole fused-ring system is nearly planar (r.m.s. deviation = 0.008 Å); its nitro substituent is nearly coplanar with the fused ring [dihedral angle = 4.5 (2)°]. In the crystal, adjacent molecules are linked by weak acetylene-nitro C-H...O hydrogen bonds, generating a helical chain running along the *b* axis.
